Search Notes

Dear Examiner Borissov:

Please find attached the results of your search for 09/965597.

The search was conducted using the mandatory database lists for Business Methods.

These other sources were also used: Internet, STN

If you have any questions, please do not hesitate to contact me.

Thanks for using EIC3600!

Energy Management Fundamentals Series: Energy Audits.

YOUNGER, BILL

Energy User News, v25, n6, p28

June, 2000

Language: English Record Type: Fulltext

Document Type: Magazine/Journal; Trade

Word Count: 3479

... energy audit.

The energy audit evaluates the efficiency of all building and process systems that **use energy**. The energy **auditor** starts at the utility meters, locating all energy sources coming into a facility. The auditor...

...use and occupancy of the building and the condition of the building and building systems **equipment**. The report also **recommends** ways to improve efficiency through improvements in operation and maintenance items (O&M), and through **installation** of energy conservation measures (ECM).

Degrees of Thoroughness

Audit levels, in order of increasing complexity...

...a tour of the facility to visually inspect each system. The walk-through includes an **evaluation** of **energy consumption** data to **analyze energy use** quantities and patterns, as well as to provide comparisons with industry averages, or benchmarks, for...

...later if the preliminary savings potential appears to warrant further auditing activity.

* Level 2--Standard **audit**. The standard **audit** quantifies **energy use** and losses through a more detailed review and analysis of equipment, systems, operational characteristics, and...

...level of energy audit and is most often warranted for complex facilities or systems. The **audit** includes more detailed **energy use** by function and a more comprehensive **evaluation** of **energy use** patterns. Computer simulation software is used to predict building system performance and accounts for changes...

...The goal is to build a base for comparison that is consistent with the actual **energy use** of the facility. The **auditor** will then make changes to improve the efficiency of various systems and measure the effects...

...of the facility. Much of this information can be collected prior to the

site visit. **Evaluating energy use** and systems before going on-site helps identify potential savings and makes best use of...

...taken to ensure you have all the information required to do a thorough and accurate **evaluation of energy consumption** data.

* Make sure you receive copies of all monthly utility bills (for all meters) and...

...when energy use depends on production. Relationships between energy use and those factors that drive **energy use** can be determined by **analyzing** the data. Some of these factors include occupancy, sales volume, floor area, and outdoor temperatures...savings.

By tracking the EUI using a rolling 12-month block, building performance can be **evaluated** based on increasing or decreasing **energy use** trends. This method requires a minimum of two years of energy consumption data to establish...

...can cause billing and actual demand to differ.

Load factor (LF) is the relationship between **electric use** (kWh) and **demand** (kW). LF is commonly **calculated** by dividing the monthly **electric use** by the **demand** by the number of hours in the billing period. This gives a ratio of average...

...maximum. For facilities with high load factors, the only way to reduce demand is by **installing** more efficient electrical equipment.

A low load factor is a good indication that a facility...

...factor and establish what is normal for each facility, noting any significant changes in the **electric use consumption** and load factor.

Analyzing Energy Data

Graphs and **consumption** data must be **analyzed** to understand how energy is used at the facility and which factors influence consumption the ...testing equipment.

Prior to touring the facility, the auditor and building manager should review the **auditor's energy consumption** profiles. The building manager can provide occupancy schedules, O&M practices, and plans that may ...support calculations should follow this summary chart. The description should describe each ECM and include **energy use** and savings **calculations**, as well as economic analysis and provide any assumptions that were made regarding operation or...

...floor plans and site notes; photos; audit data forms; motor, equipment, and lighting inventories; and **equipment** cut sheets of existing or **recommended** systems.

Followup

The building manager should review the audit report with the auditor to become...

... system operational. Large packages with up to five modules require several days for assembly and **installation** ; small sizes take a few hours. Rooftop equipment is sometimes called roof-mounted to divorce...

...of components are used in both approaches. Each component has an effect on overall performance. **Installation** and design also affect equipment characteristics.

In addition, the features that once easily distinguished packages...

...quality and substantially reduces the amount of field work required. Purchaser plant maintenance personnel often **install** or assist in the placement of the equipment, particularly small packages, to reduce costs further...

...normally cost less per ton and per square foot of conditioned space than central station **installations** .

Maintenance costs are a point of contention between packaged and central station proponents. Packaged equipment...be analyzed before a decision is made on which system has the maintenance advantage. Similar **advice** applies to the cost of **equipment** operation, which is another point of contention between unitary and central station advocates.

Several other...

...air handlers, boilers, controls, etc. This situation could lead to a significant coordination problem during **installation** , and to buckpassing if malfunctions develop.

* Simplified design and **installation** . The central system designer must coordinate all pieces of hardware without the benefit of testing...

...Packaged equipment has reduced design and field engineering requirements and is tested and balanced before **installation** .

* Spot conditioning. Packaged systems offer operating economies if only selected areas of the plant require...

...a large area.

* Backup capability. The failure of one rooftop unit when several packages are **installed** has only a minor overall effect on the plant's temperature. In addition, many unitary...

...advisable to use the fewest units that will deliver the required tonnage. This practice minimizes **installation** costs, the number of roof penetrations, and maintenance and service requirements. However, these savings must...

...condensing.

Microprocessor-based controls are capable of regulating multiple units and are easy to design, **install** , and maintain. Each package contains a control module that acts as a unit brain. The of plant energy use. The system provides optimal start/stop, scheduling, **electrical demand monitoring** , and **monitoring** and diagnostic capabilities.

Noise reduction and control are very important in some **installations** . Reduction techniques include spring-mounting compressors, dynamically and statically balancing the motor/drive/fan assembly...

Power pay backs: In an attempt to contain energy consumption, the state's utilities are rolling out incentives for businesses that adopt conservation measures

Kane, Sharyn; Keeton, Richard
Business Atlanta (Atlanta, GA, US), V22 N11 s1 p26
PUBL DATE: 931100
WORD COUNT: 1,611
DATELINE: Atlanta, GA, US

TEXT:

...For example, both offer energy audits for business customers, as well as provide incentives for **installing** energy-efficient equipment.

Many utilities, including Cobb Electric Membership Corp., offer customers energy audits free...

...EMC.

During the energy audit, an inspector tours a facility, evaluating both the building and **equipment**, then offers **advice** for reducing energy consumption. For Cobb EMC customers, most of whom are residential, the procedure...

...hour and the resulting recommendations typically include increasing insulation, applying caulking and weather stripping, and **installing** more efficient appliances.

But for big commercial and industrial users, energy audits can be far ...

...determine whether a full-scale energy audit would be worthwhile. The cost of the complete **audit** depends on the amount of **energy consumed** and, for large enterprises, the complexity of the examination. Most customers will reap significant savings...

...Georgia Power will provide 100 percent financing to pay for labor and materials used in **installing** efficient lighting systems. The loan's interest rate will be 1 percent above the prime...You pay more for efficiency," Elsberry says, "but if you are constructing a building and **install** higher efficiency equipment, you'd get your money back in a relatively short time." Developers...

You've put a tremendous amount of time and effort into designing the right **installed** A/V system for your client, integrating all of its many components and assuring elegance...

...is your friend." There's a reason for that.

Designing thermal management into an audio **installation** requires the same sort of systems approach that the rest of a project needs. But...

...and absorbed by the computer industry, where heat management is critical to keeping huge computer **installations** running.

PASSIVE AND ACTIVE

There are two main philosophies to approaching thermal management inside the...

...room itself must have the ability to remove the total heat from all racks. Many **installations** do not have the luxury of an air-conditioned environment, so consideration must be given...

...temperature significantly. Understanding how to quantify heat in this way will allow systems designers and **installers** to interact more efficiently with architects and builders.

For digital equipment, the room itself should...

...ambient air inside the closet exceeds 75 degrees Fahrenheit; 85 degrees Fahrenheit is the maximum **recommended** constant operating temperature for most **equipment**. Most studies have shown that for every 10 degrees Fahrenheit rise above 85 degrees Fahrenheit...

...on its way back to the return air (intake) duct.

Search Report from Ginger R. DeMille

In most integrated A/V **installations** , the largest heat load will come from power amplifiers while they are driven. (The state...

...save space. There are no exposed sides on racks in the middle of a multibay **installation** ; therefore the only way to introduce air is through the face or rear. Additionally, the...

...air is to incorporate a fan top.

In these cases, it is acceptable but not **recommended** to put vents between **equipment** with front intakes. Most front-intake equipment fans are between 25 and 50 CFM each...

...down to the required amount will reduce the deposited dust.

There are other considerations when **installing** fans in enclosures. The **installation** of front doors in most cases has an effect on airflow. As a general rule...

...involved will go a long way toward helping create a robust and problem-resistant rack **installation** .

Bob Schluter is president and chief engineer at Middle Atlantic Products. He is currently designing...

...cooling requirements column.

System Requirements:

For passive and active ventilation, ensure adequate intake vents are **installed** .

Be certain no short-circuiting of air occurs.

This nomograph assumes full-range rock music...

...material.

This nomograph assumes that amplifiers are driven to medium-light clipping levels.

BTU/Hr. **Calculations**

One hundred percent of the **power consumed** by communications equipment and computer products is converted to heat. Calculating BTU/Hr. output for...

Title: Power demand of electric systems

Abstract: The **power demand** factor **g** is an important planning parameter for the design of **new electric systems**. In rare cases, it can be determined from the summed-up power of all **installed power-consuming** components. In most cases, however, factors such as mode of operation, reserves, extension possibilities etc. are influencing parameters. The IEC therefore worked on a guide for **power demand** calculation for the projecting **engineer**. However, the draft was never published. The author gives some background information.

Conference Title: IEEE annual textile industry technical conference

Conference Location: Atlanta, GA, USA **Conference Date:** 7 May 1980

Source: IEEE Annu. Text. Ind. Tech. Conf., Proc. (United States) v 80CH1553-7. **Coden:** IATTD

Publication Date: 1980

p vp

Report Number(s): CONF-8005179-

Language: English

...Abstract: energy conservation. The program is structured around two major elements: in plant assistance, including energy **audits** and **consulting**, and technology transfer, including workshops, seminars and information dissemination. Energy **audits** are conducted by teams of trained, experienced Georgia Tech engineers. Data is collected on current **energy use** patterns, and each significant energy user's operating efficiency is analyzed. Modifications to both operational practices and the **equipment** or processes themselves are then considered, including the comparative economics of implementation. Formal reports are prepared with specific energy conservation **recommendations** and supporting rationale. A series of computer programs has been developed to facilitate analysis of frequently encountered potential energy conservation situations. These include programs on boiler tune-up, **installation** of an economizer on combustion units, relocation of air compressor intakes, heat recovery from dryer exhausts, and **electrical demand** control.

Unbundling electric discos: Overseas and at home

Faruqui, Ahmad; Kirsch, Laurence D

Public Utilities Fortnightly v136n7 PP: 40-45 Apr 1, 1998

Search Report from Ginger R. DeMille

ISSN: 1078-5892 JRNL CODE: PUF
WORD COUNT: 2491

...TEXT: purchasing these services from subcontractors through competitive processes.

Unbundling has led to the introduction of **new** services, some of which are listed in Table 2. For example, **new** services in Australia include improved power quality control, sub-metering, energy analysis and reporting, lighting, **power** factor corrections, and **consulting** and financing services to customers who **install** energy-saving **equipment**.

(Table Omitted)

Captioned as: Table 1.

The meaning of "unbundling" can vary among nations, even...that together comprise delivered power. It may encourage the development of billing systems and the **installation** of **equipment** (notably meters) that have costs in excess of value. It may complicate consumers' buying decisions...

The Nuts & Bolts of Capacity Planning

Posner, John J.

Computerworld v15n44 PP: In Depth 1-10 Nov 2, 1981

ISSN: 0010-4841 JRNL CODE: COW

ABSTRACT: One by-product of change is often the troublesome task of upgrading a computer **installation**. An **installation** manager who can anticipate growing demands, estimate the operating characteristics of **new** software, and order **new equipment** with generous delivery-time allowances, can ensure that the system grows and matures with less...

... into consideration the 2 fundamentals of computers and business: 1. Computer system users want rapid **service** and enough **power** to process work loads within given deadlines. 2. Business managers want computer **equipment** to be used efficiently with minimum excess capacity. The capacity planner must strike a balance...

... two. The planner must consider many aspects of the system, including accurate descriptions of current **usage**, **analysis** of overhead functions, and forecasting of the work load. ...

...model). 2. Building tune-up (envelope). 3. Load reductions (system loads). 4. Air-distribution systems **upgrades**. 5. HVAC plant **upgrades** (generation loads). Using this sequence, along with life-cycle cost **analysis**, should result in technically feasible and economically sound conservation measures. This sequence also helps avoid selection of oversized or undersized **equipment**. Often, after an energy-efficiency **analyst** identifies and reports on cost-effective measures, the client assumes the **analyst**'s job is finished. Afterward, the **analyst** has no further contact with the design team regarding those efficiency measures. This situation often...

...can be higher energy consumption and capital cost than necessary. To avoid these issues, the **analyst** should remain in contact with the design team throughout the entire design process, making sure...

...that can diminish the success of an energy-efficiency project: * Inadequate definition of purpose. * Inappropriate **analysis** tools. * Inadequate definition of baseline for savings. * Inadequate reporting. * Insufficient **analysis** involvement in the design process. * Limited or inappropriate solutions. * Poor data-collection practices. * Unnecessarily constrained economic **analysis**. * Neglect of interactions between building systems. * Lack of consistency during design and **installation** phases. * Failure to verify and report results. * Failure to test unfamiliar technologies. * Poor planning for **monitoring** exercises. * Inadequate operation and maintenance of efficiency measures. Understanding Utility Pricing Saving energy does not always mean saving money. With today's increasingly complex utility rate structures, when you **use** energy often is as important as how much you **use**. Because of these complexities, project teams conducting energy audits need to understand the utility rate ...

...bills for a particular facility. Check if the utility cost is based on time-of- **use** (peak, mid-peak, off-peak), seasonal rates, increasing or decreasing block rates, demand charges, ratcheting...
...from the dial of a conventional kilowatt-hour meter. * Fuel-charge adjustment is a relatively **new** factor based on the cost of fuel used to produce power during a given month...

...peak-demand profiles common in industrial plants. This type of profile can be expensive. Demand **monitoring** and control **equipment** can help control demand and energy costs, if the plant has loads that can be deferred. * Power-factor penalty is another misunderstood item. Utilities have to size transformers and distribution **equipment** based on the amount of amperes to be drawn. Some of these amperes are "borrowed..."

...of the facility's main power lines may help reduce costs. However, another option to **analyze** is the system-wide benefits owing to higher power factors available from many high-efficiency...

...its power factor, it also saves energy because of the motors' improved efficiencies. * Time-of- **use** rate schedules are becoming popular in some markets. Although these schedules vary from supplier to...

...peak demand to lowercost times. Gas utilities also often offer incentives to customers who can **use** gas during low- ...should investigate interruptible rates. Some gas utilities also offer rate incentives to customers who can **use** gas in the summer. making gas cooling a viable option in some instances. Sometimes the...

...gas and electric, offer numerous rebate and incentive programs that can

help further reduce energy **use** and energy costs.

DirectTv's Quarterly Subscriber Report Brings Forth Analysts' Opinions
Satellite Today
October 5, 2000 VOL: 3 ISSUE: 186 DOCUMENT TYPE: NEWSLETTER
PUBLISHER: PHILLIPS BUSINESS INFORMATION
LANGUAGE: ENGLISH WORD COUNT: 988 RECORD TYPE: FULLTEXT

(c) PHILLIPS PUBLISHING INTERNATIONAL All Rts. Reserv.

TEXT:

...of Hughes Electronics Corp. [GMH] reported late yesterday that it had added 450,000 net **new** subscribers to its high-**power**

DBS **service** during the third quarter of this year.

Through the end of September, DirectTv added 1.307 million **new** subscribers to its high-**power service** , which amounted to a 20 percent increase compared with

the first three quarters of 1999, the company said

Its Latin American DirectTv business added 126,000 net **new** customers during the third quarter and more than 332,000 net **new** customers during the first three quarters of this year, according to the company.

"While we...

...our top priorities last quarter was to conclude the conversion of customers from our medium-**power** Primestar By DirectTv **service** to the high-**power service** --a process we completed Sept. 30 after converting approximately 1.5 million customers," Hartenstein added...

...DirectTv's report of its subscriber numbers brought forth a fairly detailed review by senior **analyst** William Kidd at C.E. Unterberg, Towbin. He

said DirectTv's quarterly growth "seems to...are now focusing all resources--including our DirectTv Home Services network of over 2,000 **installers** --on implementing our most aggressive fourth quarter subscriber acquisition offer ever.

"For the first time in its history, DirectTv is entering the fourth quarter with the **equipment** and **installation** capacity needed to meet the traditionally strong year-end holiday demand--and we expect our free **installation** offer to further stimulate that demand," Hartenstein said.

By year's end, he said, DirectTv's management expects to have added

Search Report from Ginger R. DeMille

between 1.85 million and 2.05 million **new** subscribers during the year," representing another record year for DirecTv." This will exclude the more than 300,000 Primestar By DirecTv subscribers who did not convert to the high-power **service**.

Senior **analyst** Armand Musey at Bank of America Securities said the number of **new** subscribers for the third quarter was below consensus estimates, and he lowered his projections of future additional subscribers.

He now sees 625,000 **new** subscribers during the fourth quarter, rather than his previous projection of 716,650. Likewise, he...
